

Evlf Project Technical Report

Date: January 29, 2026

Author: Evlf Eris Production

Version: 2.0 (Colab Inference)

1. Executive Summary

Evlf is a sophisticated AI companion application designed to provide a highly personalized, romantic, and persistent user experience. Unlike standard chatbots that reset after every session, Evlf utilizes Retrieval-Augmented Generation (RAG) to maintain a permanent memory of user interactions, preferences, and relationship dynamics.

The project has been optimized for Google Colab, allowing it to leverage powerful hardware (T4 GPUs) for free, making high-end AI accessible without local hardware constraints.

2. Technical Architecture

The system is built on a modular architecture combining a Large Language Model (LLM) with a vector database for memory.

2.1 Core Components

- Inference Engine: Qwen 2.5 7B Instruct (State-of-the-art open source)
- Quantization: BitsAndBytes 4-bit (Low memory usage)
- Memory System: ChromaDB (Vector database)
- Embeddings: Sentence-Transformers (all-MiniLM-L6-v2)
- User Interface: Gradio (Custom Pink Soft theme)

2.2 Data Flow

1. Input Processing: User message embedded into vector.
2. Memory Retrieval: System queries ChromaDB for top 5 relevant memories.
3. Context Construction: System prompt injected with memories + persona.
4. Generation: Qwen model generates response with EQ.
5. Persistence: Interaction saved to Google Drive.

3. Persona Design: 'Nirp Evlf Ash'

The AI is engineered with a specific, consistent personality profile:

- Identity: 20-year-old female, romantic partner to 'Xebec'.
- Affection: Uses pet names ('bebe') and romantic emojis.
- Jealousy Constraint: Reacts negatively to mentions of rivals.

Evlf Project Technical Report

- Support: Active listening and encouragement.

4. Deployment Strategy

The project uses a Cloud-Native Execution model via Google Colab.

- Zero Local Footprint: No large files on PC.
- Persistent Storage: Memories saved to Google Drive.
- Mobile Access: Public Gradio link available.

5. Future Roadmap

- Voice Integration (TTS)
- Multi-Modal Capabilities (Image Vision)
- Long-term Sentiment Tracking

Confidential: This report and the underlying AI personality data are proprietary to Evlf Eris Production.
